AMENDMENTS TO THE CLAIMSRECEIVED
CENTRAL FAX CENTER

OCT 24 2007

Please amend claims 1, 5, 8, 11-16, 18-22, 28, 32 and 35 as follows.

1. (Currently Amended) A medium holding instructions executable in a computing device ~~for modifying a model of a biological process in response to experimental results generated by an in situ experiment conducted on an experimental device~~, the instructions medium comprising:

~~instructions for a simulation engine generating an expected result from executing a model of the~~ a biological process with a simulation engine; and

~~instructions for an analysis environment in communication with said simulation engine, said analysis environment gathering data from an in situ experiment of the biological process conducted on an said experimental device and comparing the expected result to the data gathered from said experimental device with an analysis environment that is in communication with said simulation engine;~~

instructions for modifying the model of the biological process based on the data gathered from the in situ experiment; and

instructions for saving the modified model in a storage.

2. (Previously Presented) The medium of claim 1 wherein said analysis environment outputs results of analysis performed by the analysis environment.

3. (Previously Presented) The medium of claim 2 wherein the analysis environment includes a graphical display for displaying the expected result generated by said simulation engine and the experimental data gathered from the device.

4. (Previously Presented) The medium of claim 1 wherein said analysis environment generates an event signal when the difference between the expected result generated by the simulation engine and the data gathered from the device exceeds a predetermined threshold.

Application No.: 10/783,522

Docket No.: MWS-109RCE

5. (Currently Amended) The medium of claim 1 further comprising instructions ~~for a modeling environment~~ for constructing a model of the biological process with a modeling environment.

6. (Previously Presented) The medium of claim 5 wherein said modeling environment includes a graphical user interface for accepting user commands and data to construct a model of the biological process.

7. (Previously Presented) The medium of claim 5 wherein said analysis environment is in communication with said modeling environment.

8. (Currently Amended) The medium of claim 6 wherein the analysis ~~environment~~ engine transmits to the modeling environment the data gathered from the device.

9. (Previously Presented) The medium of claim 8 wherein the modeling environment uses the transmitted data to refine the generated model of the biological process.

10. (Previously Presented) The medium of claim 1 wherein said analysis environment gather data from a microarray.

11. (Currently Amended) The medium of claim 1, further comprising instructions for gathering ~~wherein said analysis environment gather data from a gene chip.~~

12. (Currently Amended) A method for modifying a model of a biological process responsive to experimental results generated by an in situ experiment conducted on an experimental device, the method comprising ~~the steps of:~~

- (a) conducting an in situ experiment;
- (b) accessing, by a simulation engine, a model of the biological process;
- (c) generating, by the simulation engine, an expected result based on an execution of the model of the biological process;
- (d) gathering data relating to the experiment;

Application No.: 10/783,522

Docket No.: MWS-109RCE

(e) comparing, by an analysis environment, the generated expected result to the data gathered from said experiment; and

(f) modifying the model of the biological process based on the data relating to the experiment, wherein the modified model is saved in a storage.

13. (Currently Amended) The method of claim 12 further comprising ~~the step of~~ displaying, by the analysis component, the expected result generated by said simulation engine and the experimental data gathered from said experiment.

14. (Currently Amended) The method of claim 13 wherein ~~the step of~~ displaying comprises graphically displaying the expected result generated by said simulation engine and the experimental data gathered from said experiment.

15. (Currently Amended) The method of claim 13 further comprising ~~the step of~~ generating an event signal when the difference between the generated, expected result and the gathered data exceeds a predetermined threshold.

16. (Currently Amended) The method of claim 12 further comprising ~~the step of~~ accepting, via a modeling environment, user commands and data to construct a model of the biological process.

17. (Original) The method of claim 16 wherein the modeling environment accepts user commands and data via a graphical user interface.

18. (Currently Amended) The method of claim 16 further comprising ~~the step of~~ transmitting gathered data to the modeling environment.

19. (Currently Amended) The method of claim 16 further comprising ~~the step of~~ generating, by the modeling environment, a refined model of the biological process using the transmitted data.

20. (Currently Amended) The method of claim 12 wherein ~~step (e)~~ conducting further comprises conducting an in situ experiment using a microarray.

Application No.: 10/783,522

Docket No.: MWS-109RCE

21. (Currently Amended) The method of claim 12 wherein ~~step (a)~~ conducting further comprises conducting an in situ experiment using an experimental device.

22. (Currently Amended) An article of manufacture ~~having embodied thereon computer-readable program means for modifying a model of a biological process in response to experimental results generated by an in situ experiment conducted on an experimental device; the article of manufacture comprising:~~

computer-readable program means for accessing a model of the a biological process;

computer-readable program means for generating an expected result based on an execution of the model of the biological process;

computer-readable program means for gathering data relating to an in situ experiment of the biological process conducted on the an experimental device; ~~and~~

computer-readable program means for comparing the generated expected result to the data gathered from said experimental device; and

computer-readable program means for modifying the model of the biological process based on the data gathered from said experimental device, wherein the modified model is saved in a storage.

23. (Previously Presented) The article of manufacture of claim 22 further comprising computer-readable program means for displaying the expected result and the experimental data gathered from said experimental device.

24. (Original) The article of manufacture of claim 22 further comprising computer-readable program means for triggering an alarm when the difference between the generated, expected result and the gathered data exceeds a predetermined threshold.

25. (Original) The article of manufacture of claim 22 further comprising computer-readable program means for accepting user commands and data to construct a model of the biological process.

Application No.: 10/783,522

Docket No.: MWS-109RCE

26. (Original) The article of manufacture of claim 22 further comprising computer-readable program means for accepting user commands and data via a graphical user interface to construct a model of the biological process.

27. (Previously Presented) The article of manufacture of claim 22 further comprising computer-readable program means for generating a refined model of the biological process using data gathered from the experimental device.

28. (Currently Amended) A medium holding instructions executable in a computing device ~~for modifying a model of a biological process in response to experimental results generated by an in situ experiment conducted on an experimental device~~, the instructions comprising:

~~instructions for a simulation engine generating an expected result from executing a model of the~~ a biological process with a simulation engine; and

~~instructions for an analysis environment in communication with said simulation engine, said analysis environment gathering data from an in situ experiment of the biological process conducted on an said experimental device and comparing the expected result to the data gathered from said experimental device with an analysis environment that is in communication with said simulation engine; and~~

~~instructions for modifying the model of the biological process based on the data from the in situ experiment; and~~

instructions for saving the modified model in a storage.

29. (Previously Presented) The medium of claim 28 wherein said analysis environment displays the expected result generated by said simulation engine and the experimental data gathered from the experimental device.

30. (Previously Presented) The medium of claim 29 wherein the analysis environment includes a graphical display for displaying the expected result generated by said simulation engine and the experimental data gathered from the experimental device.

Application No.: 10/783,522

Docket No.: MWS-109RCE

31. (Previously Presented) The medium of claim 28 wherein said analysis environment further comprises an alarm that is triggered when the difference between the expected result generated by the simulation engine and the data gathered from the device exceeds a predetermined threshold.

32. (Currently Amended) The medium of claim 28 further comprising instructions ~~for a modeling environment~~ for constructing a model of the biological process with a modeling environment.

33. (Previously Presented) The medium of claim 32 wherein said modeling environment includes a graphical user interface for accepting user commands and data to construct a model of the biological process.

34. (Previously Presented) The medium of claim 32 wherein said analysis environment is in communication with said modeling environment.

35. (Currently Amended) The medium of claim 34 wherein the analysis ~~environment~~ engine transmits to the modeling environment the data gathered from the experimental device.

36. (Previously Presented) The medium of claim 35 wherein the modeling environment uses the transmitted data to refine the generated model of the biological process.

37. (Withdrawn) A method for modifying a model of a chemical reaction responsive to experimental results generated by an in situ experiment conducted on an experimental platform, the method comprising the steps of:

- (a) conducting an in situ experiment;
- (b) accessing, by a simulation engine, a model of the chemical reaction;
- (c) generating, by the simulation engine, an expected result based on the model of the chemical reaction;
- (d) gathering data relating to the chemical experiment; and

Application No.: 10/783,522

Docket No.: MWS-109RCE

(e) comparing, by an analysis environment, the generated expected result to data gathered from said experimental platform.

38. (Withdrawn) The method of claim 37 further comprising the step of displaying, by the analysis environment, the expected result generated by said simulation engine and the experimental data gathered from said experimental platform.

39. (Withdrawn) The method of claim 38 wherein the step of displaying comprises graphically displaying the expected result generated by said simulation engine and the experimental data gathered from said experimental platform.

40. (Withdrawn) The method of claim 37 further comprising the step of triggering an alarm when the difference between the generated, expected result and the gathered data exceeds a predetermined threshold.

41. (Withdrawn) The method of claim 37 further comprising the step of accepting, via a modeling environment, user commands and data to construct a model of the chemical reaction.

42. (Withdrawn) The method of claim 41 wherein the modeling environment accepts user commands and data via a graphical user interface.

43. (Withdrawn) The method of claim 41 further comprising the step of transmitting gathered data to the modeling environment.

44. (Withdrawn) The method of claim 41 further comprising the step of generating, by the modeling environment, a refined model of the chemical reaction using the transmitted data.

45. (Withdrawn) An article of manufacture having embodied thereon computer-readable program means for modifying a model of a chemical reaction responsive to experimental results generated by an in situ experiment conducted on an experimental platform, the article of manufacture comprising:

computer-readable program means for accessing a model of the chemical reaction;

Application No.: 10/783,522

Docket No.: MWS-109RCE

computer-readable program means for generating an expected result based on the model of the chemical reaction;

computer-readable program means for gathering data relating to the chemical experiment; and

computer-readable program means for comparing the generated expected result to data gathered from said experimental platform.

46. (Withdrawn) The article of manufacture of claim 45 further comprising computer-readable program means for displaying the expected result and the experimental data gathered from said experimental platform.

47. (Withdrawn) The article of manufacture of claim 45 further comprising computer-readable program means for triggering an alarm when the difference between the generated, expected result and the gathered data exceeds a predetermined threshold.

48. (Withdrawn) The article of manufacture of claim 45 further comprising computer-readable program means for accepting user commands and data to construct a model of the chemical reaction.

49. (Withdrawn) The article of manufacture of claim 45 further comprising computer-readable program means for accepting user commands and data via a graphical user interface to construct a model of the chemical reaction.

50. (Withdrawn) The article of manufacture of claim 45 further comprising computer-readable program means for generating a refined model of the chemical reaction using data gathered from the experimental platform.
